

# TriCare

## INDEPENDENCE & PEACE OF MIND FOR THE WHOLE FAMILY

## SECURE YOUR FAMILY

At AnB-Rimex, we believe that safety is more than securing you home, it is securing yourself, your family and bringing peace of mind to everyone.

We all want to live independently at home for as long as possible. However, there will come a time in our lives when we are very vulnerable and supervision of healthcare or family members is desirable. This entails difficult choices that often mean the end our independence.

## CAREFREE LIVING AT HOME.

TriCare makes it possible to take over an important part of the monitoring role without the resident losing his/her independence.

Thanks to the built-in artificial intelligence (AI) technology it is possible to recognize changes in the daily patterns of a single family member and automatically notify a caregiver or family member when an abnormal situation occurs.

TriCare watches over your loved one 24/7 who continues to live alone and independently in his/her home, with complete peace of mind.

### In abnormal situations, the system will recognize and immediately sent a message:

Some examples:

› At night wandering through the house or leaving the house

› Stay in the shower for more than 2 hours or take a shower at 2AM in the morning.

### The caregiver will also receive a notification if there is a deviation from the daily patterns:

Some examples:

› Person has slept less than 6 hours for at least 3 days in the last week

› The bathroom has not been visited for a long time

› Person has not left the kitchen for a long time

Thanks to the constant monitoring of TriCare, the quality of care improves because the caregiver is aware of all activities and possible situations with high precision. Caregivers and family members can sleep on both ears, TriCare watches over your loved one, during day and night.

### WHAT PARAMETERS WILL TRICARE OBSERVE?

› The place at home

› The moment of the day

› The duration of an action

› How often does the action repeat itself?

› In what position is the person himself?

## THE TRICARE PACKAGE

TriCare consists of a total package of sensors that record the movements of a person 24 hours a day. These sensors are connected to a control panel that registers and recognizes patterns thanks to advanced AI technology.

With each deviation, alerts are sent to one or more responsible parties.

# AUTOMATIC MESSAGES FOR TOTAL PEACE OF MIND

## ALERTING

FREQUENCY	EXAMPLE
<b>DAILY</b>	Present in the living room between midnight and 6 o'clock in the morning for longer than 1 hour
<b>SHORT TERM</b>	Minimum visit of the bathroom twice a week at abnormal hours
<b>LONG TERM</b>	Deviations in normal behavior for more than 20%

## YOUR HOME GROWS WITH YOU THANKS TO TRICOM & TRICARE

The TriCare program can be directly connected to the AnB-Rimex modular TriCom security system.

With TriCom you get the latest generation of security at home using high-performance detectors, video surveillance and home automation. This can be both wired or wireless. All components are fully compatible with the existing modules and keyboards of the Bibus and C2000 system.

When personal guidance or monitoring becomes necessary, it is very easy to integrate the TriCare module into the TriCom system. A panic transmitter or remote control for medical assistance is easy to integrate. With TriCom, your home is therefore fully prepared for the future.

## ANB-RIMEX SA, FOR MORE THAN 35 YEARS ABSOLUTE TOP QUALITY MADE IN BELGIUM

For more than 35 years, AnB-Rimex has been distributing integrated solutions in the field of burglar alarms, home automation, video surveillance, access control and fire detection systems.
